# W. & G. Improved Transmitter

Patented Aug. 29, 1916

PARTS INTERCHANGEABLE

THE standard of higher efficiency which commands the attention of progressive manufacturers to-day has been our incentive to devise and build a new and improved transmitter for sewing machines.

Its extra strong frame is supported rigidly on underside of table and is held firmly on *both* sides of the belt strain instead of only on one as in other transmitters.

The long bearings of both pulleys revolving on a hardened and ground steel shaft of large diameter insure long life. Oil is carried in a large reservoir centrally located in the shaft and is fed to the bearings as fast as needed. No oil can escape except in this manner. It is only necessary to refill the reservoir with oil through the oil cup three or four times each month.

Economy of time in the sewing operation is provided by means of powerful starting and stopping devices which will be appreciated. To avoid excessive friction when starting and in operation, ball bearings receive the end thrust and simple means are provided for taking up wear.

All parts are protected from dust, lint and dirt. If occasion arises they can be easily taken apart.

Noiselessness is a noteworthy characteristic of all Willcox & Gibbs' products, including this improved transmitter.

When ordering please specify whether transmitter is to be driven by *round* or *flat* belt.

Six feet of  $\frac{5}{16}$ " round belting is included with each round belt transmitter, but *flat* belting will be supplied only on order and then charged for.

# WILCOX & GIBBS

MANUFACTURING

## SEWING MACHINES

Chainstitch Machines—Various Types  
Lockstitch Machine—High Speed  
Straw Machine—Visible Stitch  
Straw Machine—Invisible Stitch  
Overlock Machines—Various Types.  
Flatlock Machine for making Flat Seams  
Feldlock Machines for Lap Seam Felling, and  
many other Machines for special lines of work.
