

W. & G. IMPROVED LOCKSTITCH ROLLER PULLER

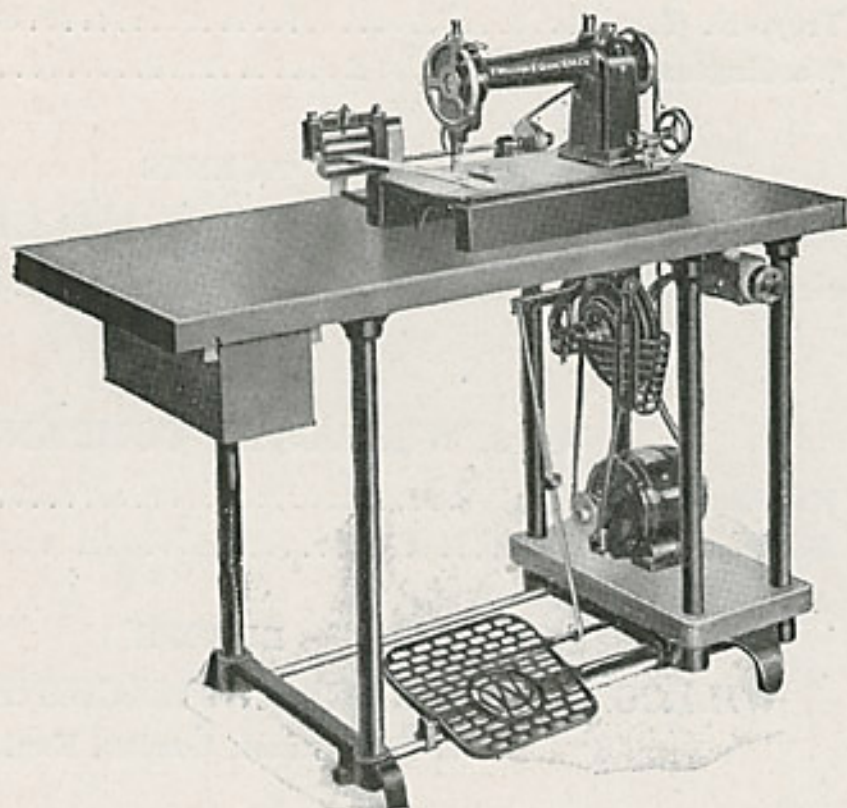

A new improved Roller Puller device has recently been perfected for use in conjunction with our Lockstitch High Speed Machine.

Being equipped with both upper and lower gears on the roller shafts insures an even and easy pull on the material at all times.

Another important feature of this attachment is the clutch device on the belt pulley which regulates the speed of the puller so that any slack in the material as it comes from the machine is instantly taken up regardless of the speed of the machine, and at the same time eliminates the gathering of material on the table top allowing the operator free use of both hands.

This attachment is particularly adaptable for use in tucking houses, as well as for manufacturers of novelty and fancy goods.

The illustration at the right shows the Roller Puller set up in conjunction with the Lockstitch Machine, which is mounted on tucking blocks to bring the rollers of the attachment on a direct line with the base of the machine.
