b. Elytra each with eight regular rows of punctures; posterior angle laterally produced.

o. Humeral callus strongly elevate-cristate.

24. Uroplata elevata. (Tab. IV. fig. 22.)
Elongata, dorso deplanata, pallide fulva, nitida; antennamurum dimidio basali piceo-nigro; thorace conico, rude punctato, piceo trivittato; elytris parallelis, apice obtusis, serrulatis, angulo postico in laminam trignonatam semicircularis recta; utrisque octo-seriato-punctatis, interstices alternis costatis, callo humerali valde elevato-cristato; margine laterali angusto, linea longitudinali, super cristam humeralis posita, et ad vix ultra medium elytri extensa, fascia angusta subapicali, lineisque duabus obliquis, interdum fere obsoletia (harum una ante, altera vix pone medium, positia), rufo-piceis, angulo postico nigro-piceo.
Long. 3 lin.

Hab. MEXICO, Playa Vicente (Sallé); PANAMA, Bugaba 800 to 1500 feet, David, Caldera in Chiriquí 1200 feet, Taboga Island (Champion).

Head strongly produced between the eyes; vertex and front opaque, the latter impressed with a faint longitudinal fovea. Antenne rigid, equal in length to the head and thorax; six lower joints short, cylindrical, the five upper ones forming a distinct, slightly compressed club; five lower joints piceous, the rest fulvous. Thorax conic, scarcely broader at the base than long; sides converging from base to apex; subcylindrical, hinder disc transversely excavated, coarsely and closely punctured. Elytra parallel, obtusely rounded at the apex; the hinder angle produced laterally into an acute, triangular, nigro-piceous tooth, the apex of which curves slightly backwards, its upper surface carinate; sides rather strongly serrulate, the serrations more irregular on the apical margin; each elytron with eight regular rows of large deep punctures, the second, fourth, and sixth interspaces costate; humeral callus strongly elevated, cristate.

25. Uroplata buqueti.
Elongata, depressa, fulva; subitus nitida, pedibus flavis; supra subnita, digitis pallide rufo-castaneis; thorace cum longitudine aquilato, conico, lateribus rectis; disco rugoso-punctato, castaneo trivittato; elytris parallelis, apice obtuse truncatis, angulo postico in laminam trignonatam, dorso cristatam, lateraliter productum; margine laterali minute, apicali magis distincte et irregulariter, serrulatis; utrisque octo-seriato-punctatis, interspatis secundo, quarto sexloque costatis; callo humerali valde elevato, cristato; linea submarginali, a basi ad apicem extensa, fasciace angusta subapicali, rufo-piceis, angulo postico piceo.
Long. 2 lin.

Hab. PANAMA, Bugaba (Champion).

Vertex and front smooth, impunctate, the former with a faint fuscous patch. Antenne scarcely longer than the head and thorax, robust, thickened towards the apex; joints short, cylindrical; apex of the club slightly compressed. Thorax not longer than broad, conic; sides straight, converging from base to apex, rugose-punctate, the lateral margin, together with a narrow discoidal vitta, rufo-piceous. Elytra subelongate, parallel,
