North Mexico, region of San Luis Potosi, 6000 to 8000 feet (Parry & Palmer, 524);  

184. PSATHYROTES.  
Herbaceous plants restricted to North Mexico and the adjoining country.

California; Arizona.—North Mexico, Sonora.

North Mexico, near El Paso and Santa Maria, Chihuahua (Bigelow &c.).  Hb. Kew.

North Mexico, Sonora (Schott, Thurber).  Hb. Kew.  
Bentham and Hooker retain the genus Pseudoephelium, doubtfully referring it to the Senecionideae (Gen. Plant. ii. p. 438).

Tribe VII. ANTHEMIDEÆ.  
Forty-five genera, including nearly 700 species, are referred to this tribe. Of these only twelve genera and sixty-three species are American; and only three of the genera are endemic in America.

185. ACHILLEA.  
A genus of about one hundred herbaceous species, inhabiting the northern hemisphere, and chiefly in the Old World.

South Mexico, Omitlan (Hartweg), Desierto Viejo (Bourgeau, 838).  Hb. Kew.  
This plant is dispersed all round the temperate zone of the northern hemisphere, and extends into the Arctic regions; but it may have been introduced into Mexico.

186. BAILEYA.  
Herbs, endemic in the Mexican region.
