

3. *Syntomedia saulcyi*.

Glaucopis saulcyi, Guérin, Ic. Règ. Anim. p. 502¹.

Endera saulcyi, Butl. Journ. Linn. Soc., Zool. xii. p. 367.

Calonota? niveifascia, Walk. Cat. vii. p. 1628.

Hab. MEXICO, Cordova (*Rümel*).—MARTINIQUE¹.

This species is closely allied to *S. melanthus*, and I consider much better placed here than in the genus *Endera*.

4. *Syntomedia epilais*.

Euchromia (Hippola) epilais, Walk. Cat. i. p. 227¹.

Syntomedia epilais, Butl. Journ. Linn. Soc., Zool. xii. p. 366; Ill. Lep. Het. i. p. 23, t. viii. f. 5.

Hab. MEXICO, Yucatan (*Gaumer*); BRITISH HONDURAS¹, Rio Sarstoon (*Blancaneaux*).

This species seems to be peculiar to Mexico and Honduras. I have not seen any specimens from any other locality.

ENDERA.

Endera, Walker, Cat. i. p. 228 (1854).

Walker founded this genus upon a Mexican insect, and then included in it six other species belonging to very different genera. Mr. Butler, in his notes on the family Zygænidæ, restricts it to *E. vulcanus*, the type of Walker's genus, and *Glaucopis saulcyi*, Guérin, a species I consider much more closely allied to *Syntomedia*, to which I have removed it.

1. *Endera vulcanus*.

Euchromia (Endera) vulcanus, Walk. Cat. i. p. 228¹.

Glaucopis vulcanus, Herr.-Schäff. Samml. aussereur. Schmett. f. 295.

Endera vulcanus, Butl. Journ. Linn. Soc., Zool. xii. p. 367.

Hab. MEXICO¹.

This species is well figured by H.-Schäffer. The type is in the British-Museum collection; it is the only specimen that I am acquainted with.

EUPYRA.

Eupyra, Herrich-Schäffer, Samml. aussereur. Schmett. p. 78.

This genus contains about seven species, two of which occur in our country.

1. *Eupyra principalis*.

Eupyra principalis, Walk. Cat. xxxi. p. 97; Butl. Journ. Linn. Soc., Zool. xii. p. 367.

Hab. MEXICO, Oaxaca (*Sallé, mus. Brit.*).

This fine species is closely allied to *E. regalis*, Herr.-Schäff. The only specimen known to me is the type in the British Museum.
