

a few indistinct spots cross the wings from the apex to near the anal angle, in others they are entirely wanting. Expanse, ♂ 2 inches, ♀ $2\frac{3}{4}$ inches.

Hab. COSTA RICA, Irazu, Rio Sucio (*Rogers*).

This species seems to be most nearly allied to *E. læta*, but I think quite distinct. I have several specimens of both sexes before me, and they do not show much variation, excepting in the markings of the secondaries of the female.

8. *Ecpantheria ochreator*.

Ecpantheria ochreator, Feld. Reise Nov. Lep. iv. t. 101. f. 2.

Hab. CENTRAL AMERICA (*Salvin, mus. Felder*).

This species is only known to me from Dr. Felder's figure.

9. *Ecpantheria atra*.

Ecpantheria atra, Oberthür, Etudes d'Entomologie, vi. p. 109, t. 15. f. 4¹.

Hab. MEXICO, Oaxaca¹.

This insect is quite unknown to me excepting by the figure. I very much doubt if it belongs to this genus.

ARACHNIS.

Arachnis, Hübn. Samml. exot. Schmett. f. 913, 914; Clemens. Proc. Acad. Nat. Sci. Phil. xii. p. 525.

1. *Arachnis aulæa*.

Arachnis aulæa, Hübn. loc. cit.; Walk. Cat. xxxi. p. 300¹; Clemens, loc. cit. p. 526.

Ecpantheria aulæa, Oberthür, Etudes d'Entomologie, vi. p. 111, t. 19. f. 4, 7².

Ecpantheria incarnata, Walk. Cat. iii. p. 690³; Clemens, Proc. Acad. Phil. xii. p. 524.

Hab. MEXICO^{1 2 3}, Jalapa (*Höge*); BRITISH HONDURAS, Rio Sarstoon (*Blancaneaux*).

This species varies to some extent in the markings of the secondaries; in some specimens they are almost black, the red bands being reduced to minute red spots.

2. *Arachnis picta*.

Arachnis picta, Packard, Proc. Ent. Soc. Phil. iv. p. 126¹; Walk. Cat. xxxv. p. 1912.

Ecpantheria picta, Oberthür, Etudes d'Entomologie, vi. p. 112, t. 19. f. 5, 8.

Hab. NORTH AMERICA, California¹.—MEXICO, Milpas 5900 feet (*Forrer*).

The single example of what I believe to be this species is rather darker in colour than M. Oberthür's figure, but the markings agree fairly well; in all other respects it is the same.

3. *Arachnis sanguinea*.

Ecpantheria sanguinea, Oberthür, Etudes d'Entomologie, vi. p. 112, t. 20. f. 1, 2¹.

Hab. MEXICO¹, near the city (*Höge*).

A single example of this fine insect was received.
