

Fig. 3. 3 a. MILLEPORA TORTUOSA, different varieties of form; 3 b, extremity of branch.—p. 545.

Fig. 4. MILLEPORA FUMIDA, corallium, natural size.—p. 545.

Fig. 5. MILLEPORA PLATYPHYLLA; 5 a, surface, with cells, enlarged; 5 a', same, natural size; 5 b, general appearance of transverse section, natural size; 5 c, same, enlarged.—p. 548.

Figs. 6 a, 6 b. CONSTELLARIA CONSTELLATA, transverse and vertical section, very much magnified. (The diameter of the cells in the specimens is about a tenth of a line.)—p. 537.

PLATE 53.

Fig. 1. MILLEPORA INCRASSATA, part of corallium, natural size.—p. 547.

Fig. 2. MILLEPORA PLATYPHYLLA, var. TRUNCATA, part of corallium, natural size; 2 a, position and size of cells.—p. 548.

Fig. 3. PORITES MORDAX, corallium, natural size; 3 a, cell enlarged.—p. 552.

Fig. 4. P. MORDAX, var. ELONGATA, corallium, natural size.—p. 553.

Fig. 5. PORITES COMPRESSA, corallium, natural size; 5 a, cell enlarged.—p. 553.

Fig. 6. PORITES FLEXUOSA, part of branch, natural size.—p. 554.

Figs. 7, 8, 9, 10, 11, 12. Sections of cells in species of Porites.—p. 550.

PLATE 54.

Fig. 1. PORITES NIGRESCENS, corallium, natural size (part of a clump); 1 a, portion of the surface, magnified; 1 b, part of a transverse section of a branch, enlarged.—p. 537.

Fig. 2. PORITES NIGRESCENS, var. MUCRONATA, corallium, natural size.—p. 558.

Fig. 3. PORITES PALMATA, corallium, natural size; 3 a, a portion of surface, showing two cells enlarged.—p. 558.

Fig. 4. PORITES CYLINDRICA, corallium of part of a clump, natural size.—p. 559.

Fig. 5. PORITES LEVIS, outline view of a branch of a corallium, natural size; 5 a, 5 b, polyps in different positions; 5 c, surface, enlarged; 5 d, part of a transverse section, enlarged.—p. 559.

Fig. 6. PORITES CONTIGUA, part of a clump, natural size; 6 a, surface of corallium, enlarged.—p. 560.

PLATE 55.

Fig. 1. PORITES LOBATA, corallium, natural size; 1 a, 1 b, cells, enlarged.—p. 562.

Fig. 2. PORITES LIMOSA, part of corallium, natural size; 2 a, cells, enlarged.—p. 563.

Fig. 3. PORITES CONGLOMERATA, corallium, natural size; 3 a, cell, enlarged.—p. 561.

Fig. 4. PORITES FAVOSA, corallium, natural size; 4 a, cells, enlarged.—p. 564.

Fig. 5. PORITES CRIBRIFORA, corallium, natural size; 5 a, cell, enlarged.—p. 564.

Fig. 6. PORITES INFORMIS, corallium, natural size; 6 a, expanded polyps and surface of zoophyte, enlarged; 6 b, cells and surface of corallium, enlarged; 6 c, part of a transverse section of corallium, enlarged.—p. 565.

Fig. 7. PORITES MONTICULOSA, corallium, natural size; 7 a, ex-

panded polyps, enlarged; 7 b, cells, enlarged; 7 c, part of a transverse section, enlarged.—p. 566.

Fig. 8. PORITES EROSA, corallium, natural size; 8 a, cell, enlarged.—p. 565.

Fig. 9. PORITES FRAGOSA, surface of corallium, natural size; 9 a, cells, enlarged.—p. 563.

PLATE 56.

Fig. 1. ANTIPATHES ANGUINA, extremity of zoophyte, with polyps expanded, natural size; 1 a, axis of the same; 1 b, 1 c, polyps, enlarged; 1 d, portion of axis, enlarged.—p. 576.

Fig. 2. ANTIPATHES ARBOREA, part of a branch, with polyps expanded; 2 a, polyp, enlarged; 2 b, part of trunk, natural size.—p. 584.

Fig. 3. PORITES RETICULOSA, corallium, very slightly magnified (incorrectly referred to as fig. 1).—p. 567.

Fig. 4. PORITES LICHEN, corallium, natural size.—p. 566. (Incorrectly referred to as fig. 2.)

Fig. 5. GONIOPORA COLUMNA, with polyps expanded, natural size; 5 a, polyp, enlarged; 5 b, part of corallium, showing the cells, natural size.—p. 569.

PLATE 57.

Fig. 1. RENILLA AMERICANA, natural size, with the polyps expanded; 1 a, polyp, enlarged; 1 a', tentacle.—p. 588.

Fig. 2. RHIZOXENIA PRIMULA, polyps, natural size, on a piece of coral rock; 2 a, polyp, enlarged.—p. 601.

Fig. 3. XENIA CERULEA (?), natural size; 3 a, polyp, enlarged; 3 b, part of tentacle, more enlarged.—p. 605.

Fig. 4. XENIA FLORIDA, natural size; 4 a, upper view of tentacle, enlarged; 4 b, under view.—p. 606.

Fig. 5. XENIA ELONGATA, natural size; 5 a, under view of tentacle, enlarged; 5 b, upper view, ib.—p. 606.

Fig. 6. ALCYONIUM FLEXILE, unexpanded.—p. 619.

Fig. 7. ALCYONIUM CONFERTUM, unexpanded, one branch with the polyps partly retracted; 7 a, some of the spicula; 7 b, polyp, partly expanded.—p. 621.

Fig. 8. ALCYONIUM BRACHYCLADUM (?).—p. 617.

PLATE 58.

Fig. 1. ALCYONIUM TRICANTHINUM, natural size; the polyps of part expanded, but owing to the long, flexible, capillary tentacles, the animals are not separately distinct.—p. 630.

Fig. 2. ALCYONIUM RIGIDUM, unexpanded, natural size.—p. 622.

Fig. 3. ALCYONIUM MURALE, unexpanded, natural size.—p. 622.

Figs. 4 and 5. ALCYONIUM GLAUCUM, natural size.—p. 623.

Fig. 6 a. ALCYONIUM LATUM, surface, magnified, of unexpanded zoophyte; 6 b, expanded polyp, enlarged; 6 b', natural size of polyp.—p. 623.

Fig. 7. ALCYONIUM LATUM?

PLATE 59.

Fig. 1. TUBIPORA SYRINGA, part of a zoophyte, expanded; 1 a, polyp, enlarged; 1 a', tentacle, more enlarged; 1 b, section, show-
