

nymous with *H. undulata*), if a specimen in the Sallé collection is correctly so named, and which certainly agrees with Mulsant's description. Neither species is represented in Crotch's collection, and it is certainly better to keep them distinct. The present species, of which we have received a series from Morrison under the name *H. undulata*, agrees with Crotch's description, and no doubt occurs in the adjoining State of California. The other localities quoted by Crotch² may refer to *H. elegans*.

iii. *Elytra black, the humerus and two spots yellow.*

9. **Hyperaspis lateralis.** (Tab. X. fig. 24, ♂.)

Hyperaspis lateralis, Muls. Spec. Col. Trim. sécur. p. 657¹; Crotch, Rev. Coccin. p. 235².

Hab. MEXICO^{1 2}, Guanajuato (*Sallé*).

The male has the head, and the front margin and sides of the thorax, narrowly yellow. The elytral markings are blood-red, and they do not differ in the two specimens now before me. The head and thorax in the female example are entirely black.

We figure a male from Sallé's collection.

iv. *Elytra black, with a median and a subapical fascia, more or less united, yellow.*

10. **Hyperaspis lunulata.**

Hyperaspis lunulata, Muls. Spec. Col. Trim. sécur. p. 680¹; Crotch, Rev. Coccin. p. 235².

Hab. MEXICO^{1 2}.

I have not seen an authenticated example of this species; it is not represented in Crotch's collection. The male, as in so many of the species described by Mulsant, was unknown to him. Two specimens from Guanajuato in Sallé's collection (♂ and ♀), so named, are clearly referable to *H. connectens*. It is possible that the name *H. lunulata* may be a synonym of *H. connectens*.

11. **Hyperaspis connectens.**

Coccinella connectens, Schönh. Syn. Ins. ii. p. 157, nota¹.

Hyperaspis connectens, Muls. Spec. Col. Trim. sécur. p. 662²; Crotch, Rev. Coccin. p. 230³.

Hab. MEXICO³ (*Sallé*), Jalapa (*Höge*), Orizaba (*H. H. Smith*), Guanajuato (*Sallé*); GUATEMALA, near the city (*Champion*); NICARAGUA, Chontales (*Janson*).—ANTILLES³, St. Eustatius^{1 2}, St. Bartholomew².

12. **Hyperaspis cincticollis.** (Tab. X. fig. 23.)

Cleothera cincticollis, Muls. Spec. Col. Trim. sécur. p. 553¹.

Hyperaspis cincticollis, Crotch, Rev. Coccin. p. 230².

Hab. PANAMA, San Miguel in the Pearl Islands (*Champion*).—COLOMBIA^{1 2}.

Crotch remarks that this may be merely a variety of *H. festiva*. Mr. Champion met
