

allied to *H. jansonis* and *H. beatrix*, but differs from both, the most marked difference being that the extremity of the abdomen is greenish black instead of red, as it is in the above-mentioned species.

4. *Homœocera beata*.

Homœocera beata, Butl. Journ. Linn. Soc., Zool. xii. p. 376¹.

Hab. PANAMA (*Ribbe, mus. Staudinger*).—COLOMBIA (*Bouchard*¹); BRAZIL.

The example in Dr. Staudinger's collection agrees well in all respects with Mr. Butler's type.

5. *Homœocera salvini*.

Homœocera salvini, Butl. Journ. Linn. Soc., Zool. xii. p. 376; Ill. Lep. Het. pt. i. p. 27, t. 17. f. 4.

Hab. PANAMA, Obispo (*Salvin*).

The only example of this insect with which I am acquainted was taken by Mr. Salvin some years ago near Obispo, and presented by him to the British Museum; it is very distinct, and the largest species of this genus found in our country.

SAROSA.

Sarosa, Walker, Cat. i. p. 151 (1854).

Three species only are placed in this genus by Mr. Butler, one of them being found in our country. It is allied to *Erruca*, from which it chiefly differs by its longer and narrower primaries and more deeply pectinated antennæ.

1. *Sarosa pompilina*. (Tab. VI. fig. 24.)

Sarosa pompilina, Butl. Journ. Linn. Soc., Zool. xii. p. 377¹.

Hab. PANAMA, Volcan de Chiriqui (*Ribbe*).—ECUADOR (*mus. D.*); BRAZIL, Espiritu Santo¹.

The specimen from Chiriqui agrees well with the type. I have only seen a single example from our country. Mr. Champion did not meet with this species.

ERRUCA.

Erruca, Walker, Cat. i. p. 165 (1854).

Walker founded this genus for the reception of a single insect. Mr. Butler, in his revision of the Zygænidæ in the British Museum, has placed about thirteen species in it, mostly from the Neotropical Region. I have lately described three others from Ecuador, making about sixteen known species, only one of them having been previously recorded from our country. I now add the description of another species.

1. *Erruca varia*.

Glaucopis (Isanthrene) varia, Walk. Cat. i. p. 157¹.

Erruca varia, Butler, Journ. Linn. Soc., Zool. xii. p. 378.

Hab. PANAMA, Bugaba (*Champion*).—AMAZONS, Para¹.
